Annotated Checklist of the Birds of Cuba

©Nils Navarro Pacheco & Ernesto Reyes Mouriño, 2017

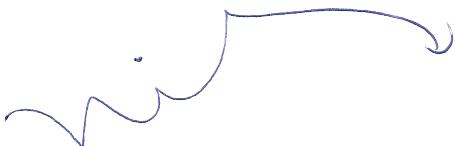

©Ediciones Nuevos Mundos, 2017

ISSN 2574-2620

The Annotated Checklist of the Birds of Cuba is an annual publication that grew from the need to provide updated information about changes that have affected birds registered in the Cuban archipelago. Development of new techniques in genetic studies, new interpretations of speciation and evolutionary phenomena have also emerged, considerably modifying the traditional way of viewing ornithology and resulting in rapid changes in taxonomy and systematics, often beyond what we can assimilate through the normal flow of information.

In addition, the growing demand for bird-watching tourism on the island and the implementation of monitoring programs of migratory species are contributing to an increase in the number of previously unregistered species entering the list every year. Furthermore, the influence of climate change is producing altered patterns of migratory movements in many species.

Our main objective is to provide up-to-date annual listings of Cuban birds, including reference information on each new report and general statistics about Cuban birdlife, as well as to promote the inclusion of articles to publicize new bird records, and in general to serve as a reference platform for ornithological studies in the country. It is our obligation to continuously search for funds to make this printed publication accessible, free of charge, to the community of local ornithologists and to the institutions involved in the conservation and study of Cuban birds.

Nils Navarro
Senior Editor

37 File a report of new records	
38 Notes	

Listed Species

The species listed here are those for which there is a specimen; clearly distinctive sound recording; diagnostic photograph or a description that reflects familiarity with the species; fits distinctive field marks; and clearly distinguishes this species from similar species. We include reference citations and comments (*in super index numbers*) for the more recent or rare records.

Taxonomy and Names

Taxonomic Sequence

The order in which taxa are sorted based on the *Handbook of the Birds of the World Alive*, <http://www.hbw.com> (3/07/2017).

Common Name

The English common name for each species as defined by the most current version of the *Checklist of North and Middle American Birds 2017, AOU*, <http://checklist.aou.org> (accessed 12/September/2017)

Local Name

The Cuban Common Name (CCN) is the one used throughout the country to refer to any specific bird, according to Garrido and Kirkconnell, 2011, *Aves de Cuba*, the first edition in Spanish. They are not always the same as the standardized names in Spanish used by SEO/BirdLife Int. (Sociedad Española de Ornitología) or similar. The CCN is useful for communication within the country. There are also other local names that are not included in this checklist. Keep in mind that some CCN could vary in pronunciation; often the local people contract words such as *Carpintero Jabado*, which becomes *Carpintero Jabao* or *Rabudita*, which becomes *Rabuítá*.

For recent inclusion of new records in the checklist we use the SEO name, as there is no CCN yet.

Scientific Name

The scientific name for each species as defined by the most current version of the *Handbook of the Birds of the World Alive*, <http://www.hbw.com> (3/07/2017).

Threat Status

IUCN categories from www.BirdLifeDataZone.htm, 2017 (accessed 06/08/2017), are listed in bold. For the Cuban assessment we followed the updated criteria in González, H. et al., 2012 *Libro Rojo de los Vertebrados Cubanos* based on the *IUCN Standards and Petitions Working Group*. The data referring to the Cuban population status has been enriched and updated by local specialists and appears in *italics* when the IUCN criteria is different. Uncertain status is designated by the ? symbol.

Extinct (E)

Critically Endangered (CR)

Endangered (EN)

Vulnerable (VU)

Near Threatened (NT)

Least Concern (Lc)

Resident Status

Year Round (YR): A species that is likely to occur throughout the entire year. We use a combined term, **Bimodal (b)**, when referring to species which show various resident status, and where some birds migrate and others remains on the archipelago.

Summer Resident (SR): A species that is likely to occur in the Northern Hemisphere summer season (June – September), usually from South America.

Winter Resident (WR): A species that is likely to occur in the Northern Hemisphere winter season (November – February), and often includes some portion of migration seasons (September – October and March – May), usually from North America.

Transient (T): A species that is likely to occur only during the Northern Hemisphere migration seasons (September – October and March – May).

Casual (Cs): A species that is a casual visitor or vagrant out of its common range.

Note: The month ranges given above are guidelines. Because of differing life histories and geographic ranges, many species have different timings of migration and the actual month ranges for these seasonality values will be different among species.

Endemic Region

The endemic region is the most restrictive overarching region of endemism for each endemic species, i.e., a species that occurs in both the Greater and Lesser Antilles is considered a West Indian endemic, whereas a species that is endemic to Cuba and Hispaniola is considered a Greater Antillean endemic.

Cuba (CU): A species that is restricted to the Cuban archipelago. The symbol ^ means that the bird also inhabits the Cayman Islands.

West Indies (WI): A species that is not restricted to a single region but that is restricted to islands in the West Indies.

Greater Antilles (GA): A species that is restricted to islands in the Greater Antilles.

Lucayan (LY): A species that also occurs on islands in the Lucayan Archipelago (Bahamas, Turks and Caicos).

Western Caribbean (WC): A species restricted to the Western Caribbean, i.e., San Andrés and Providencia.

Abundance status

The relative density (qualitative) with which a species occurs in the appropriate habitat.

Common (Co): A species that occurs in high densities.

Fairly Common (FC): A species that occurs in moderate densities.

Locally Common (LC): A species with patchy distribution or restricted to special localities or habitats where it is common.

Uncommon (U): A species that occurs in low densities.

Rare (R): A species that occurs in very low densities or is an occasional visitor (present on average not more than twice a year and at least once every five years).

Very Rare (VR): A species that occurs in extremely low densities or is a rare visitor (present on average less than once every five years).

Exceptionally Rare (ExR): A species that occurs exceptionally and usually comes from the Old World or Central America.

†: A species that is extinct globally.

Note: The abundance categories will not be applied to the overarching West Indies checklist due to the highly variable nature of species abundance across the entire region.

Breeding Status

Breeding (Br): A species that reproduces within a specific region.

Non-Breeding (-): A species that does not reproduce within a specific region.

Note: We do not consider the Cuban Martin a Breeding Endemic, due to the sightings of breeding birds in the Centre Comercial Carrefour Milenis, Pointe-à-Pitre, Guadeloupe (Lesser Antilles). Frantz Delcroix and Anthony Levesque published these photos in eBird referring to Purple Martins pairing with Caribbean Martins. There are photos of paired birds from 2013 and 2017 in nesting sites and feeding their chicks. ID confirmed by the senior author, supported by photography (eBird Frantz Delcroix (Duzont); Checklist S38314461, Sunday Jul. 09, 2017).

Introduced:

We follow the British Ornithologist Union set of definitions for introduced species.

<https://www.bou.org.uk/british-list/species-categories/>

Category C:

A species whose presence results from human introduction.

Established Exotic (C1): A species with a self-sustaining population that occurs only as a result of introduction(s).

Mixed Exotic (C2): A species with a self-sustaining population resulting from introduction(s), where some individuals could occur in a natural state.

Reintroduction (C3): A species with populations successfully re-established in areas of former occurrence.

Feral Exotic (C4): Domesticated species with populations established in the wild.

Vagrant Exotic (C5): A species seen as a vagrant from an established introduced population.

Extirpated Exotic (C6): An introduced species which formerly had self-sustaining populations that are either no longer self-sustaining or are considered extirpated.

Category E:

Species recorded as introductions, human-assisted transportees or escapees from captivity, and whose breeding populations (if any) are thought not to be self-sustaining.

Non-established Exotic (E): An introduced and not established species.

Possible future changes:

Topics which may be considered next year by AOU involving Cuban species include splitting White-winged Scoter, splitting Cuban population of Meadowlark from Eastern Meadowlark, and lumping Bicknell's Thrush back into Gray-cheeked Thrush. Major revisions of higher-level hummingbird and vireo taxonomy are also anticipated (AOU, 2017).

*The Grassland Yellow-Finch (*Sicalis luteola*) had been erroneously mentioned (*lapsus*) in some papers [GARRIDO, O. H., AND J. W. WILEY. 2010. First Cuban occurrence of Orange Bishop (*Euplectes franciscanus*). Journal of Caribbean Ornithology 23:55–57 and RODRÍGUEZ (CASTANEDA), Y., J. W. WILEY, and O. H. GARRIDO. Additional Records of Lazuli Bunting (*Passerina amoena*) and First Records of Several Wild-caught Exotic Birds for Cuba. Journal of Caribbean Ornithology, 2017 (in press)] linking it (perhaps by a *lapsus*) to the reference where Saffron Finch was reported in GARRIDO, O. H. 1997. *Sicalis flaveola* (Aves: Emberizidae) – nueva especie para la avifauna cubana. Pitirre 10(2):55.

Exotic Species

Species recorded as introductions, human-assisted transportees or escapees from captivity, and whose breeding populations (if any) are thought not to be self-sustaining. These birds should not be considered part of the Cuban avifauna and are not included in the Cuban main list.

⁷ **Ruff (*Calidris pugnax*)**: eBird. 2017. Cornell Lab of Ornithology, Ithaca, NY. www.ebird.org (accessed 04/August/2017) registered in Cayo Coco, Ciego de Ávila Province, 25/April/2017, Andrew Haffenden. Confirmed ID, supported by photos.

⁸ **Lesser Black-backed Gull (*Larus fuscus*)**: Recent Sight Reports of Lesser Black-Backed Gulls (*Larus fuscus*) from Cuba. P. William Smith and Susana Smith. *El Pitirre* 13(2): 43, Summer 2000.

⁹ **Cooper's Hawk (*Accipiter cooperii*)**: Reports of Cooper's Hawk (*Accipiter cooperii*), Swainson's Hawk (*Buteo swainsoni*), and Short-tailed Hawk (*Buteo brachyurus*) in Cuba. Fredy Rodríguez-Santana. *J.Raptor Res.* 44(2):146-150, 2010.

Also: Bird Migration Across Western Cuba, Alina Perez, A. Llanes, J. M de la Cruz, R. Valera, H. Gonzalez, NAOC meeting Washington, D.C. 2016. They reported a maximum count of two birds on 07/October/2014 and eight birds in one-year period 2012-2015.

¹⁰ **Mississippi Kite (*Ictinia mississippiensis*)**: Franklin's Gull *Larus pipixcan* and Mississippi Kite *Ictinia mississippiensis* new to Cuba. Burke, P., A. Kirkconnell and S. M. Whitehouse. *Cotinga* 14:101, 2002.

¹¹ **Swainson's Hawk (*Buteo swainsoni*)**: Reports of Cooper's Hawk (*Accipiter cooperii*), Swainson's Hawk (*Buteo swainsoni*), and Short-tailed Hawk (*Buteo brachyurus*) in Cuba. Fredy Rodríguez-Santana. *J.Raptor Res.* 44(2):146-150, 2010.

Also: eBird. 2017. eBird, Cornell Lab of Ornithology, Ithaca, NY. www.ebird.org (accessed 04/August/2017) registered at Crocodile Farm, Matanzas Province, 05/September/2016, Ernesto Reyes. Confirmed ID.

Also: Bird Migration Across Western Cuba, Alina Perez, A. Llanes, J. M de la Cruz, R. Valera, H. Gonzalez, NAOC meeting Washington, D.C. 2016. They reported a maximum count of 19 birds on 30/July/2013 and 63 birds in a one-year period 2012-2015.

¹² **Short-tailed Hawk (*Buteo brachyurus*):** Reports of Cooper's Hawk (*Accipiter cooperii*), Swainson's Hawk (*Buteo swainsoni*), and Short-tailed Hawk (*Buteo brachyurus*) in Cuba. Fredy Rodríguez-Santana. *J.Raptor Res.* 44(2):146-150, 2010.

Also: Bird Migration Across Western Cuba, Alina Perez, A. Llanes, J. M de la Cruz, R. Valera, H. Gonzalez, NAOC meeting, Washington D.C. 2016. They reported a maximum count of five birds on 13/October/2014 and 24 birds in a one-year period 2012-2015.

¹³ **Common Kingfisher (*Alcedo atthis*):** The Common Kingfisher (*Alcedo atthis*): An Exceptional First Record for the West Indies and the Western Hemisphere. Yaroddy Rodríguez, Orlando H. Garrido, James W. Wiley, & Arturo Kirkconnell. *Ornitología Neotropical* 16: 141, 2005.

¹⁴ **Red-and-green Macaw (*Ara chloropterus*):** Introduced in Cayo Saetía, Holguín Province, in the 80s, later escaped from the key and now widespread inland in a range of about 600 km² along the northern coast of Holguín Province. Currently breeding in the wild, and has been reproducing in the area for at least five years, Carlos Peña com. pers. 2017. Confirmed by photos: birds in the wild, flocks, nesting, and breeding in natural and artificial cavities.

¹⁵ **Blue-and-yellow Macaw (*Ara ararauna*):** *Idem.*

¹⁶ **Scarlet Macaw (*Ara macao*):** *Idem.*

¹⁷ **Cassin's Kingbird (*Tyrannus vociferans*):** Primer registro del Pitirre de Cassin (*Tyrannus vociferans*) para las Antillas y nuevos reportes del Bobito Americano (*Sayornis phoebe*) y del American Pipit (*Anthus rufulus*) para Cuba. Aslam I. Castellón Maure, Frantz Delcroix (Duzont), Nils Navarro Pacheco y Roberto Varela Montero. Annotated Checklist of the Birds of Cuba, 1(1):34,2017 (in this number).

¹⁸ **Vermilion Flycatcher (*Pyrocephalus rubinus*):** eBird, Cornell Lab of Ornithology, Ithaca, NY. www.ebird.org (accessed 04/August/2017) registered in Cabo de San Antonio, Guanahacabibes, Pinar del Río, 08/October/2016, Maikel Cañizares and Gustavo Blanco. Confirmed ID, supported by photos.

¹⁹ **House Crow (*Corvus splendens*):** Further Records and Updates of Range Expansion in House Crow *Corvus splendens*. Colin Ryall. Bull. B.O.C. 2016 136(1). First recorded in Cayo Guillermo 25/November/2007 by R. Ford, still present 17/March/2010 and in mid-August/2011. Confirmed ID.

²⁰ **Hermit Thrush (*Catharus guttatus*):** Hermit Thrush and Black-Throated Gray Warbler, New for Cuba, and Other Significant Bird Records from Cayo Coco and Vicinity, Ciego De Ávila Province, Cuba, 1995-1997. George E. Wallace, Elizabeth A. H. Wallace, Daniel R. Froehlich, Brett Walker, Arturo Kirkconnell, Eliser Socarrás Torres, Heather A. Carlisle, and Eric Machell. *Florida Field Naturalist* 27(2):37-51, 1999. ID supported by Photo.

²¹ **Eurasian Blackcap (*Sylvia atricapilla*):** First record of Eurasian Blackcap (*Sylvia atricapilla*) for Cuba and the West Indies. Yaroddy Rodríguez, Nils Navarro and Juan C. Fernández Ordoñez, Annotated Checklist of the Birds of Cuba, 1(1): 25, 2017 (in this number).

²² **American Pipit (*Anthus rufulus*):** First report of American Pipit (*Anthus rufulus*) in Cuba. Good, M. J., and G. Alayon. 2014. Caribbean Conservation Trust, December 1–13, 2014. Halifax River Audubon Cuba bird survey. (http://www.downeastnaturetours.com/cubareport_dec2015.pdf; accessed 30 October 2015).

Also: eBird. 2017. eBird, Cornell Lab of Ornithology, Ithaca, NY. www.ebird.org (accessed 04/August/2017) registered in Cabo de San Antonio, El Verraco, 03/December/2014, Michael J. Good. Confirmed ID, supported by photos.

²³ **Lapland Longspur (*Calcarius lapponicus*)**: First Record of Lapland Longspur (*Calcarius lapponicus*) in the Caribbean. Orestes Martínez, Lazaro Cotayo, Arturo Kirkconnell & James W. Wiley. *Bull. B.O.C.* 136(4). Supported by photos, 2016.

²⁴ **Dark-eyed Junco (*Junco hyemalis*)**: First Record of Dark-eyed Junco (*Junco hyemalis*) for Cuba and Some Other Interesting Records. Andy Mitchell. *Journal of Caribbean Ornithology*. 22:98-99, 2009.

²⁵ **Altamira Oriole (*Icterus gularis*)**: First Record of Altamira Oriole (*Icterus gularis*) for Cuba and the West Indies. Nils Navarro and Kenia Medina. *Annotated Checklist of the Birds of Cuba*, 1(1): 26, 2017 (in this number).

²⁶ **Yellow-tailed Oriole (*Icterus mesomelas*)**: ID confirmed by Orlando Garrido based on a skin from the Gundlach Collection, Orlando Garrido com. pers., 2017.

²⁷ **Kirtland's Warbler (*Setophaga kirtlandii*)**: eBird, Cornell Lab of Ornithology, Ithaca, NY. www.ebird.org (accessed 04/August/2017) registered in Playa Pilar, Ciego de Ávila, 23/February/2017, Anne Goulden. Confirmed ID, supported by photos.

²⁸ **Black-throated Gray Warbler (*Setophaga nigrescens*)**: Hermit Thrush and Black-Throated Gray Warbler, New for Cuba, and Other Significant Bird Records from Cayo Coco and Vicinity, Ciego De Ávila Province, Cuba, 1995-1997. George E. Wallace, Elizabeth A. H. Wallace, Daniel R. Froehlich, Brett Walker, Arturo Kirkconnell, Eliser Socarrás Torres, Heather A. Carlisle, and Eric Machell. *Florida Field Naturalist* 27(2):37-51, 1999. ID supported by photo.

²⁹ **Townsend's Warbler (*Setophaga townsendi*)**: eBird, Cornell Lab of Ornithology, Ithaca, NY. www.ebird.org (accessed 04/August/2017), registered in Topes de Collantes, Sancti Spiritus, 18/February/2015, Joshua D. Vandermeulen. Confirmed ID, supported by photos.

³⁰ **Blue-black Grassquit (*Volatinia jacarina*)**: El "Arrocero Negrito", *Volatinia jacarina splendens* (Vieillot) (Fringillidae: Aves), en Cuba. Garrido, O. H., and F. García Montaña. Trabajo Divulgación, Museo "Felipe Poey," de la Academia de Ciencias de Cuba 50:1-6, 1967.

³¹ **Rose-ringed Parakeet (*Psittacula krameri*)**: Rose-ringed Parakeet (*Psittacula krameri*) Recorded in the West Indies, Guy M. Kirwan. *El Pitirre*, vol. 13 No. 2, 2000.

³² **White-eared Bulbul (*Pycnonotus leucotis*)**: Additional Records of Lazuli Bunting (*Passerina amoena*) and First Records of Several Wild-caught Exotic Birds for Cuba. Yaroddy Rodríguez Castaneda, James W. Wiley, and Orlando H. Garrido, *Journal of Caribbean Ornithology*, 2017 (in press).

³³ **Red-faced Liocichla (*Liocichla phoenicea*)**: Additional Records of Lazuli Bunting (*Passerina amoena*) and First Records of Several Wild-caught Exotic Birds for Cuba. Yaroddy Rodríguez Castaneda, James W. Wiley, and Orlando H. Garrido, *Journal of Caribbean Ornithology*, 2017 (in press).

³⁴ **Red-billed Leiothrix (*Leiothrix lutea*)**: Additional Records of Lazuli Bunting (*Passerina amoena*) and First Records of Several Wild-caught Exotic Birds for Cuba. Yaroddy Rodríguez Castaneda, James W. Wiley, and Orlando H. Garrido, *Journal of Caribbean Ornithology*, 2017 (in press).

³⁵ **Crested Myna (*Acridotheres cristatellus*)**: Additional Records of Lazuli Bunting (*Passerina amoena*) and First Records of Several Wild-caught Exotic Birds for Cuba. Yaroddy Rodríguez Castaneda, James W. Wiley, and Orlando H. Garrido, *Journal of Caribbean Ornithology*, 2017 (in press).

³⁶ **White-winged Snowfinch (*Montifringilla nivalis*)**: Additional Records of Lazuli Bunting (*Passerina amoena*) and First Records of Several Wild-caught Exotic Birds for Cuba. Yaroddy Rodríguez Castaneda, James W. Wiley, and Orlando H. Garrido, *Journal of Caribbean Ornithology*, 2017 (in press).

³⁷ **Orange Bishop (*Euplectes franciscanus*):** First Cuban Occurrence of Orange Bishop (*Euplectes franciscanus*). Garrido, O. H., and J. W. Wiley. *Journal of Caribbean Ornithology* 23:55-57, 2010.

³⁸ **Yellow-mantled Widowbird (*Euplectes macroura*):** Additional Records of Lazuli Bunting (*Passerina amoena*) and First Records of Several Wild-caught Exotic Birds for Cuba. Yaroddy Rodríguez Castaneda, James W. Wiley, and Orlando H. Garrido, *Journal of Caribbean Ornithology*, 2017 (in press).

Recent taxonomic changes

^a **Northern Harrier (*Circus hudsonicus*):** Split separates New World and Old World populations, *C. hudsonicus* and *C. cyaneus* respectively

^b **Giant kingbird (*Tyrannus cubensis*):** We considered the species a *de facto* Cuban endemic. Surveys of the larger uninhabited islands in the Turks and Caicos in 1999 failed to find the species, and it is presumed locally extinct (G. Hilton *in litt.* 1999). BirdLife International. 2016. *Tyrannus cubensis*. The IUCN Red List of Threatened Species 2016: e.T22700516A93782366. <http://dx.doi.org/10.2305/IUCN.UK.2016-3.RLTS.T22700516A93782366.en>. Downloaded on 29 August 2017.

##### ##Exotic Species not already established, probably escaped from captivity or vagrants from introduced populations (not considered part of the Cuban avifauna yet)	15	3.6%	vs total species registered for Cuba, including non-established exotics

Short communications

This section will publish first records for the Cuban avifauna. Papers no more than 550 words in length should be submitted in Spanish or English (font Cambria 11). To submit papers please send to: nilsarts71@gmail.com and write in the subject “first record Cuban Checklist + name of the bird”. Each first record should be accompanied by a photo with enough quality to support a good ID of the bird (no more than 1.5 MB). New issues will be published every August. The photos must be accompanied by the coordinates indicating the name of the locality, municipality, province, finder or collector, date, weather conditions and any other important information the author chooses to include.

New Records

First record of Eurasian Blackcap (*Sylvia atricapilla*) for Cuba and the West Indies.

Yaroddy Rodríguez*, Nils Navarro ** and Juan C. Fernández Ordoñez***

* Calle H. Castillo, No. 501 Esquina Eladia, Ciego de Ávila, Cuba; email: yaro_rguez@yahoo.es; ** Camilo Cienfuegos No. 26 / Celso Maragoto and Adela Azcuy, Viñales, PR, Cuba; email: nilsarts71@gmail.com; *** Fundación Científica ARA MACAO, Apartado 94, San Carlos 2201, Venezuela, email: avesenmano@gmail.com

Keywords: Cuba, first record, *Sylvia atricapilla*, Blackcap, West Indies.

Fig. 1: Female Eurasian Blackcap (*Sylvia atricapilla*), captured by Pavel González in the vicinity of Santa Fé, near Havana, October 17, 2012. Photo Yaroddy Rodríguez.

The Eurasian Blackcap (*Sylvia atricapilla*) usually known simply as the Blackcap, is a common and widespread typical warbler in much of Europe, western Asia and northwestern Africa, and its preferred habitat is mature deciduous woodland (Eurasian Blackcap. (2017, July 22). *Wikipedia, The Free Encyclopedia*. Retrieved 23:27, August 22, 2017).

The adult male has olive-grey upperparts, a paler grey nape and a neat black cap on the head. The underparts are light grey, becoming silvery white on the chin, throat and upper breast. The tail is dark grey, with an olive tint to the outer edge of each feather. The bill and long legs are grey, and the iris is reddish brown. The female resembles the male, but has a reddish-brown cap and a slightly browner tone from the grey of the upperparts. Juveniles are similar to the female, but their upperparts have a slight rufous tinge, and the breast and flanks have a more olive tone; young males have a darker brown cap than their female counterparts (Eurasian Blackcap. (2017, July 22). *Wikipedia, The Free Encyclopedia*. Retrieved 23:27, August 22, 2017).

The Blackcap is a leap-frog migrant; birds from the north of the breeding range travel furthest south, whereas Mediterranean breeders move much shorter distances. The wintering areas overlap with the breeding range, but also include extensive areas in West Africa, East Africa south to Lake Malawi, and further north in Ethiopia, South Sudan and Eritrea. Climate change appears to be affecting the migration pattern of the Blackcap.

In recent decades, substantial numbers of central European birds have taken to wintering in gardens in Great Britain, and, to a lesser extent, Ireland and Iceland and one record from Southeast

Greenland (AOU Propossal Set, 2017-C). There is no other record for US or Canada. Blackcaps and other small birds are illegally trapped and hunted in large numbers in Mediterranean countries, particularly in Lebanon, Syria, Palestine, Malta, Libya, Egypt and Cyprus, where they are considered a delicacy. Despite hunting and natural hazards, the European population of the Blackcap has been rising for several decades as the range extends northwards, for example to Scotland and Denmark. There are occasional nesting records from outside the main range, such as in northern Israel and the Faroes, and wandering birds may have appeared further afield in Iceland in November 2003, 2005 and June 2017 (<https://notendur.hi.is/yannk/photos03.html>)

<https://notendur.hi.is/yannk/photos05.html> and (<https://notendur.hi.is/yannk/birdnews.html>); or on the islands of Arctic Russia. In the Baltic, the spread of the Blackcap appears to have been helped by the availability of territories formerly occupied by the declining Barred Warbler (Eurasian Blackcap. (2017, July 22). *Wikipedia, The Free Encyclopedia*. Retrieved 23:27, August 22, 2017. The fact that the Blackcap is now considered an annual vagrant to Iceland, and there is one record from Southeast Greenland (AOU Proposal, Sept 2017-C), suggest that more occurrences in the Western Hemisphere could be expected in the future. It has been approved to be part of the North American main list (AOU Proposal Sept, 2017-C, www.checklist.aou.org accessed 12/Sept/2017).

An extremely rare record of the Blackcap was made in Cuba in the vicinity of Santa Fé, near Habana, Cuba; it must be considered as vagrant. The bird was a female with the typical color pattern of a reddish-brown cap with slightly brown upperparts with olive tint and whitish underparts, the tail feathers were damaged in captivity (Fig.1). It was captured by Pavel González, a local bird-trapper, who reported that the bird arrived together with a group of warblers during the fall migration October 17, 2012. The bird survived for one year and seven months in a cage. The senior author took pictures and videos of the live bird (www.eBird.org). We can assume that this record came from North America where it could mix with a flock of other New World Warblers moving southward. It is also the first record for the West Indies.

Acknowledgments: We would like to thank Pavel González for letting us know about these rare birds when they appeared, and to Paul Baicich and Wayne Petersen for their comments and suggestions.

First record of Altamira Oriole (*Icterus gularis*) for Cuba and the West Indies.

Nils Navarro Pacheco* and Kenia Medina López**

*Camilo Cienfuegos No. 26/ Celso Maragoto and Adela Azcuy, Viñales, PR, Cuba; email: nilsarts71@gmail.com ;

**Museo de Historia Natural "Joaquín Fernandez de la Vara Pí, Luz Caballero No.23 e/ Independencia y Sartorio, Gibara, Holguín, Cuba. Email: kenial75@nauta.cu

Key words: Cuba, first record, Altamira Oriole, *Icterus gularis*, West Indies

Fig. 2: Immature specimen of Altamira Oriole (*Icterus gularis*), with the catalog number 0382 of the Gibara Museum of Natural History "Joaquín de la Vara" collection; collected by Joaquín de la Vara Pí, in the vicinity of Gibara, Holguín, Cuba; November 16, 1954. Photo: Nils Navarro.

The Altamira Oriole (*Icterus gularis*) is a New World oriole and the largest oriole in the *Icterus* genus. The bird is widespread in subtropical lowlands of the Mexican Gulf Coast and northern Central America, the Pacific coast and inland where it is a permanent resident. They have since spread to southern Texas, but this was not until 1939. Little is known about its natural history. It is a sedentary species without migratory movement at least as is currently known. The only accepted record outside of Texas was in the USA in January 2012, on Horn Island off the coast of Mississippi, near the border of Mississippi and Alabama (www.eBird.org) where it remained for almost two weeks. This record suggests that it could move eventually out of its range. Its presence in Cuba is an exceptionally rare record.

Adult Altamira Oriole males and females have a black mandible and throat, as well as a black back and long black tail. Wings are black, but the remiges and rectrices are fringed with white. These form a single white wing bar and white wing spots when folded. The secondary coverts form orange epaulets. The underside is almost uniformly orange or yellowish-orange. Immature specimens have an olive back, and a dull yellow on the head and body, no conspicuous marks on the wings and the scapular patch is restricted and lighter. The first-year bird is similar to the adult, but it has an olive, not black, back, and yellow-olive tail. Altamira Oriole. (2017, July 5). Wikipedia, The Free Encyclopedia. Retrieved 23:50, August 22, 2017.

While the senior author was reviewing the bird collection of the Joaquín de la Vara Museum of Natural History in Gibara, Holguín, he found a mounted bird belonging to the Oriole group that was identified with a label on the base as "Turpial de Garganta Negra (*Icterus cucullatus*)". The larger size, color pattern and massive bill confirmed that a more accurate identification of the bird was needed.

This is a heavy body bird compared with the other members of the group; it has a massive bill and shows the typical color pattern of the immature Altamira Oriole (*Icterus gularis*): a generally dull yellow-orange color with a narrow black throat patch and brownish upperparts with some olive tint on tail and mantle (Fig. 2). The specimen has a catalog number 0382; it was collected by Joaquín de la Vara in the vicinity of Gibara November 16, 1954. It was subsequently donated to the museum after its opening in 1966.

Gibara is renowned as an important bird corridor where many of the first records were registered for the Cuban archipelago, especially during the 60s and 70s of the 20th century, in the time of Joaquín de la Vara, who was an enthusiastic and passionate naturalist. We don't have more details about how this bird reached Cuba. It is also the first record of the Altamira Oriole for the West Indies.

Acknowledgments: Thanks to Greg Homel for sharing his expertise about Central American birds, and for his help confirming the ID; to Jeff Gerbracht for his contribution to the eBird records and comments; to Andy Mitchel for his comments and suggestions, to Ailen Anido from the Joaquin de la Vara Museum for her support reviewing and finding the information we requested.

Primer registro del Pitirre de Cassin (*Tyrannus vociferans*) para las Indias Occidentales y nuevos reportes del Bobito Americano (*Sayornis phoebe*) y del American Pipit (*Anthus rubescens*) para Cuba.

*Aslam I. Castellón Maure**, *Frantz Delcroix (Duzont)***, *Nils Navarro Pacheco**** y *Roberto Varela Montero.*****

*Sociedad Cubana de Zoología, Calle 33 No. 7219, Cienfuegos, Cuba, email:aslam870@gmail.com **Association AMAZONA, Rue Simonet, Pointe d'Or 97139 Les Abymes, email: oiseauxguadeloupe@yahoo.fr; ***Sociedad Cubana de Zoología, Camilo Cienfuegos 26 (altos) /Celso Maragotto y Adela Azcuy, Viñales, Pinar del Río, Cuba, email: nilsarts71@gmail.com; ****Roberto Varela Montero, Parque Nacional Guanahacabibes, Pinar del Río, Cuba, email: lmarquez@vega.inf.cu

Key words: Cassin's Kingbird, American Pipit, Eastern Phoebe, record, Cuba.

Fig. 1: Pitirre de Cassin (*Tyrannus vociferans*), Playa El Judío, Guanahacabibes, Cuba, 29 de octubre de 2017. Vista lateral donde se puede observar el patrón típico de coloración gris oscuro en el pecho y cabeza así como la conspicua mancha blanca debajo de los ojos, característica de la especie. Foto: Aslam I. Castellón.

Fig. 2: Pitirre de Cassin (*Tyrannus vociferans*), en vuelo, tomada en la misma localidad el 29 de Octubre de 2017, nótese la conspicua mancha blanca debajo del ojo, así como el borde blanco en la punta de la cola, ambas características distintivas de la especie. Foto: Frantz Delcroix (Duzont).

Durante un recorrido de observación de aves en áreas del Parque Nacional Guanahacabibes en el extremo occidental de la isla de Cuba el día 29 de Octubre de 2017, cercana a la carretera que conduce hacia playa "El Judío" a unos 36 km al W de La Bajada, fueron fotografiadas diversas especies de aves, entre ellas un individuo del Pitirre de Cassin (*Tyrannus vociferans*), el cual se encontraba perchando en la vegetación xeromorfa costera a una altura que varió entre 1.20 y 1.80 metros sobre el suelo. El avistamiento se realizó a las 14:50 y el ave permaneció por alrededor de 15 minutos en el campo visual, el mismo individuo fue observado en dos perchas diferentes una de ellas una rama de Plumeria sp. (Fig. 1). En ambas situaciones se encontraba en el matorral xeromorfo costero.

Se trataba de un individuo adulto de la especie, cuyas marcas de campo eran evidentes: vientre amarillo, pico moderadamente corto y con el pecho y cabeza de color gris oscuro y una conspicua mancha blanca debajo del ojo, lo cual lo diferencia del resto de las especies con las que pudiera confundirse (Western, Tropical y Couch) Fig. 1 y 2. Otra de las marcas de campo de esta especie es la existencia de una estrecha línea blanca que bordea el extremo distal de las plumas de la cola, siendo este un carácter distintivo para la especie (Fig. 2).

El Pitirre de Cassin es un ave nativa de: Belize; Canadá; Guatemala; Honduras; México y Estados Unidos. Es una especie parcialmente migratoria con una población residente en zonas altas del centro y sur de México (*T. v. xenopterus*) (Clements, 2007), la subespecie nominal se distribuye fundamentalmente en el oeste de los Estados Unidos, aunque existen registros bien documentados para el este de Norteamérica, incluso reportes periódicos como visitante regular al sur de la Florida (Stormwater Treatment Area 5/6, Hendry County, Florida, US; <http://ebird.org/ebird/view/checklist/S13735324>) donde ha sido anualmente observado y fotografiado desde 2007 (eBird, 2017), por lo que no es extraño que la especie se encontrara en Cuba durante la migración otoñal. Este es el primer record del Pitirre de Cassin para Cuba y también para las Indias Occidentales.

Fig. 3: American Pipit (*Anthus rubescens*), playa “El Holandés”, Guanahacabibes, Pinar del Río, Cuba. Tomada el 29 de Octubre de 2017. Foto: Aslam I. Castellón.

American Pipit (*Anthus rubescens*): Constituye el segundo registro para Cuba, el primer registro fue realizado el 3 de Diciembre de 2014 en Playa Verraco (Michael Good, <http://ebird.org/ebird/view/checklist/S20770795>), en la misma área del Cabo de San Antonio e igualmente en los días de un frente frío proveniente de Norteamérica. Este nuevo avistamiento se realizó en la “Playa El Holandés”, situada a unos 35 km al W de La Bajada el propio día 29 de Octubre de 2017, el ave se encontraba forrajeando entre las algas arrastradas por las olas en la línea de playa (Fig. 3), pocos días antes Orlando Garrido (com. pers., 2017) observó un ejemplar a unos 35 km al este, en zonas costeras aledañas a La Bajada, lo que pudiese ser argumento para asumir la posibilidad de que no se tratase de un individuo aislado y que se trate de un visitante regular en esta área.

Fig. 4: Bobito Americano (*Sayornis phoebe*), playa “Los Ingleses”, Guanahacabibes, Pinar del Río, Cuba. Tomada el 29 de Octubre de 2017. Foto: Aslam I. Castellón.

Bobito Americano (*Sayornis phoebe*): Se trata del noveno registro de la especie para Cuba, anteriormente había sido reportado en el mes de Febrero, en el siglo XIX; luego el 14 y el 16 de Septiembre de 1960 en Tarará, Provincia de la Habana, otro el 28 de Noviembre y el cuarto sin fecha especificada (Garrido y Kirkconnell, 2000), luego dos registros en 7 de Noviembre de 2010 y 6 de Noviembre de 2012 en la Península de Guanahacabibes (Sebastiani et al. 2010, Good 2012) y más recientemente el 15 y 19 de Febrero de 2016, en Cayo Santa María, provincia de Villa Clara (Burrel and Nopf, 2016).

El nuevo avistamiento se realizó en la localidad de playa “Los Ingleses”, situada a unos 16 km al W de “La Bajada” cerca de la carretera al Cabo de San Antonio, Península de Guanahacabibes, provincia de Pinar del Río (Fig. 4). En este caso el ave se encontraba posada sobre una pequeña piedra junto a un charco de agua de lluvia estancada, en un claro del bosque de unos 20 metros de ancho. Al acercarse al ave, esta voló hacia el bosque y se internó en la vegetación más densa.

Durante la misma sesión fueron observadas otras especies que pueden considerarse relativamente poco comunes y que al parecer habían llegado a la isla recientemente, tales como: el Bobito de Bosque del Este (*Contopus virens*), Gorrión de Coronilla Blanca (*Zonotrichia leucophrys*), Gorrión de Savana (*Passerculus sandwichensis*) y Gorrión Colorado (*Spizella pallida*).

Es de destacar que las observaciones tuvieron lugar en los días posteriores al primer frente frío de la temporada y con un disturbio atmosférico convirtiéndose en la depresión Tropical número 18 avanzando desde el sur con una extensa área de nublados e intensas lluvias, devenida el 28 de Octubre en Tormenta Tropical atravesando la isla de Cuba en su porción occidental. Dichos fenómenos meteorológicos en sinergismo pueden forzar a muchas especies a modificar sus rutas tradicionales y a empujar a grupos migratorios que arrastran consigo otras especies menos comunes, tormentas más organizadas pueden capturar en su centro de bajas presiones a individuos de diferentes especies de aves y trasladarlas fuera de su rango de distribución. Por otra parte los eventos meteorológicos del sur en conjunción con frentes fríos presionando desde el norte limitan los movimientos migratorios de muchas aves transeúntes y las obligan a concentrarse y mantenerse más tiempo en los sitios de tránsito como Cuba.

File a report of new records

Please upload your sightings to the eBird site (www.ebird.org) to record new additions and listed species. This will contribute to improved knowledge of Cuban and West Indian birds. For first records or very rare birds, use this form.
