Tabla 1: Respuesta de seis leguminosas arbóreas tropicales a la inoculación con MVA nativas de dos suelos diferentes colectados en un bosque y el talud adyacente al camino. MSPA- Masa Seca de las Partes Aéreas; MSR- Masa Seca Raíz; % CM- Porcentaje de Colonización Micorrízica; MEVA- Micelio Externo de las MVA; No.Nod- Número de Nódulos por planta; MS Nod- Masa Seca Nódulos por planta. Medias con la misma letra no difieren significativamente. Prueba de Duncan ($p < 0.05$).

Tabla 2. Valores de dependencia micorrízica (Pérez-Maqueo, 1995) de seis leguminosas arbóreas inoculadas con dos suelos con diferentes potenciales de colonización micorrízica, colectados en un bosque primario y en el talud adyacente al mismo. Además algunas variables calculadas a las semillas de las plantas empleadas. RS- Reservas Seminales (embrión más endospermo y/o cotiledón); CS- Cubiertas Seminales; DM- Dependencia Micorrízica; MSPA- (Masa Seca Parte Aérea; MSR- (Masa Seca Raíces).

| Especies y tratamientos | Tamaño (mm) | Masa seca (mg) | Masa seca RS (mg) | Masa seca CS (mg) | DM MSPA | DM MSR | DM Total Media |
